**On**  
**E-commerce Application using MERN stack**

**Submitted By:**

<b>C Narasimhulu</b>	<b>R170574</b>
<b>T Sai Kumar</b>	<b>R170575</b>
<b>G Prasad</b>	<b>R170649</b>

**Under the guidance of:**

**Ms.Udaya Sree,**  
**Assistant professor,**  
**Department of CSE.**

**Department of Computer Science and Engineering**

**Rajiv Gandhi University of Knowledge Technologies**

**(Catering the Educational Needs of Gifted Rural Youth of A.P)**

**R.K Valley, Y.S.R Kadapa (Dist.)-516330**

Rajiv Gandhi University of Knowledge Technologies RK  
Valley, Kadapa (Dist), Andhra Pradesh, 516330

---

## **DECLARATION**

We hereby declare that the report of the B.Tech Mini Project Work entitled with the “E-Commerce Application Using MERN Stack” which is being submitted to Rajiv Gandhi University of Knowledge Technologies, RK Valley, in partial fulfillment of the requirements for the award of Degree of Bachelor of Technology in Computer Science and Engineering, is a bonafide report of the work carried out by me. The material contained in this report has not been submitted to any university or institution for award of any degree.

<b>C Narasimhulu</b>	<b>R170574</b>
<b>T Sai Kumar</b>	<b>R170575</b>
<b>G Prasad</b>	<b>R170649</b>

Rajiv Gandhi University of Knowledge Technologies RK  
Valley, Kadapa (Dist), Andhra Pradesh, 516330

---

## **CERTIFICATE**

This is to certify that the project work titled “Ecommerce Application Using MERN Stack ” is a bonafied project work submitted by C Narasimhulu,G.Prasad,T.Sai kumar in the department of COMPUTER SCIENCE AND ENGINEERING in partial fulfillment of requirements for the award of degree of Bachelor of Technology in Computer science and engineering for the year 2022-2023 carried out the work under the supervision

### **Guide**

**MS.UDAYA SREE**

Assistant professor,  
Department of CSE.

### **Head of the Department**

**MR.SATYANANDARAM**

Lecturer,  
HOD OF CSE,  
RGUKT RK Valley.

## ACKNOWLEDGEMENT

The satisfaction that accompanies the successful completion of any task would be incomplete without the mention of the people who made it possible and whose constant guidance and encouragement crown all the efforts success.

I am extremely grateful to our respected Director, Prof. K. SANDHYA RANI for fostering an excellent academic climate in our institution.

I also express my sincere gratitude to our respected Head of the Department Mr. SATYANANDARAM for his encouragement, overall guidance in viewing this project a good asset and effort in bringing out this project. I would like to convey thanks to our guide at college MS. UDAYA SREE for his guidance, encouragement, co-operation and kindness during the entire duration of the course and academics. My sincere thanks to all the members who helped me directly and indirectly in the completion of project work. I express my profound gratitude to all our friends and family members for their encouragement.

## Abstract

In today's generation, most people are using technology for leading their lives and fulfilling their daily needs. In this generation most of us using E-commerce websites for shopping for clothes, groceries, and electronics. We have developed one E-commerce web application by using MERN stack technology as it contains MongoDB, Express.JS framework, React.JS library, Node.JS platform. This application is fully functional with different views for user and admin and it also has integrated with payment gateway for checkout. By using this website we can buy different types of t-shirts and we can choose different styles of t-shirts based upon customer interests. In this project, we can add different products and can delete them also. We have developed administrative functions for the website such as create a product, create categories, Admin dashboard, Manage products, Manage categories. For customers, they can quickly add their items to the cart. Based on the items in the cart then the bill gets generate and the customer can pay by using stripe.

**KEYWORDS:** JavaScript, React.js, MongoDB, Node.js, Express.js, Bootstrap

# Introduction

## 1.1 Overview

It is true that technology has become an essential tool for online marketing nowadays. However, there are numerous small shops and grocery stores with mostly offline business model in Vietnam recently. With this commerce model, it will bring a lot of bad experiences for both buyers and sellers. For instance, the seller has the product want to offer but the buyer may not know it, or the buyer may urgently need to purchase something, but the store is out of stock. Moreover, online shopping helps customers to choose a wide range of products, prices and they can compare them to each other easily. Encountering the inadequacies and the weaknesses of the offline business model, making a website application for searching and buying things for each shop is very necessary right now.

In order to make a website that can acquire the needs of both customers and retailers, MERN (MongoDB, Express.js framework, ReactJS library, NodeJS platform) is one of the powerful stacks that can help us to develop an e-commerce web application.

## 1.2 Scope of project

Purchasing and selling products and services over the internet without the need of going physically to the market is what online shopping all about. Online shopping is just like a retail store shopping that we do by going to the market, but it is done through the internet. Online shopping has made shopping painless and added more fun. Online stores offer product description, pictures, comparisons, price and much more. Few examples of these are Amazon.com, ebay.com, framt.com and the benefits of online shopping is that by having direct access to consumer ,the online stores can offer products that cater to the needs of consumer ,cookies can be used for tracking the customer selection over the internet or what is of their interest when they visit the site again . Online shopping makes use of digital technology for managing the flow of information, products, and payment between consumer, site owners and suppliers.

## 1.3 Purpose of project

The purpose of online shopping is to save time, save money. Through online shopping one can save his valuable time. One can watch and select things he wanna to buy. Through online shopping we can save our money because prices are less than market prices and we receive our bought things at our home. No need to go anywhere and do shopping. We can get different varieties of things online and we can choose which one we want.

## 1.4 Proposed System

The development of this new system contains the following activities, which try to develop online application by keeping the entire process in the view of database integration approach.

- Secure registration and profile management facilities for Customers.
- Browsing through the e-Mall to see the items that are there in each category of products like Apparel, Kitchen accessories, Bath accessories, Food items etc.
- Creating a Shopping cart so that customer can Shoppe 'n' no. of items and checkout finally with the entire shopping cart
- Customers should be able to mail the Shop about the items they would like to see in the Shop
- Secured mechanism for checking out from the Shop( Credit card verification mechanism)
- Updates to customers about the Recent Items in the Shop.
- Uploading 'Most Purchased' Items in each category of products in the Shop like Apparel, Kitchen accessories, Bath accessories, Food items etc.

## 2. Feasibility Analysis

Feasibility study is the process of determination of whether or not a project is worth doing. Feasibility studies are undertaken within tight time constraints and normally culminate in a written and oral feasibility report. I have taken two weeks in feasibility study with my co-developer. The contents and recommendations of this feasibility study helped us as a sound basis for deciding how to proceed the project. It helped in taking decisions such as which software to use, hardware combinations, etc.

1) Technical Feasibility 2) Economical Feasibility 3) Operational Feasibility

**2.1 TECHNICAL FEASIBILITY:** Technical feasibility determines whether the work for the project can be done with the existing equipment, software technology and available personnel. Technical feasibility is concerned with specifying equipment and software that will satisfy the user requirement. This project is feasible on technical remarks also, as the proposed system is more beneficiary in terms of having a sound proof system with new technical components installed on the system. The proposed system can run on any machines supporting Windows and Internet services and works on the best software and hardware that had been used while designing the system so it would be feasible in all technical terms of feasibility.

**2.2 ECONOMICAL FEASIBILITY:** Economical feasibility determines whether there are sufficient benefits in creating to make the cost acceptable, or is the cost of the system too high. As this signifies cost-benefit analysis and savings. On the behalf of the cost-benefit

analysis, the proposed system is feasible and is economical regarding its pre-assumed cost for making a system. We classified the costs of eSHOP according to the phase in which they occur. As we know that the system development costs are usually one-time costs that will not recur after the project has been completed.

**2.3 OPERATIONAL FEASIBILITY:** It is mainly related to human organization and political aspects. The points to be considered are: •What changes will be brought with the system?

## 3. Software and Hardware Requirements

### 3.1 Software Requirements :

Operating System : Windows XP/7 or Linux

User Interface : React, Bootstrap

Front End : React

Back End : Node Js, Express Js

Database: Mongo Db

Browser : Chrome

### Hardware Requirements:

Processor : Intel Pentium IV

Hard Disk : 1.44 MB FDD

RAM : 512MB or more

Monitor : 15" Colour monitor

Processor Speed : 1.7 GHZ

CD Drive : 52-X CD ROM

Keyboard : Mercury 110 keys

Mouse : Logitech mouse

## 4. System Study

### 4.1 DEFINITION OF THE SYSTEM:

A system is an orderly grouping of independent components linked together according to a plan to achieve a specific objective. Its main characteristics are organization, interaction, independent, integration and central objective a system does not necessarily mean to a computer system. It may be a manual system or any other names.

## 4.2 NEEDS OF THE SYSTEM:

Social and economic factor: a wave of social and economic changes often follows in the wake of the new technology. New opportunities may arise to improve on a production process or to do something that was not previously possible. Changes in the ways individuals are organized into groups may then be necessary, and the new groups may compete for economic resources with established units. Technological factor: people have never before in a time when the scope of scientific inquiry was so broad, so when the speed of applying the new technology accounts for many changes in the organization. High level decisions and operating processes: in response to technological, socio-economical factors, top level managers may decide to recognize operations and introduce new products. To deal with these needs, people commonly seek new modified information to support the decision. When that happens, then they obtain turn to a computer system for help the information users and data processing specialist then work together to complete a series of steps in a system study to produce output results to satisfy information needs.

## 4.3 SYSTEM ANALYSIS

System Analysis is a process by which we attribute process or goals to a human activity, determine how well those purpose are being achieved and specify the requirements of the various tools and techniques that are to be used within the system if the system performances are to be achieved.

# 5. MERN STACK

## JavaScript

JavaScript is a scripting, object-oriented, cross-platform programming language. Objects of host environment can be connected to JavaScript and arrange ways to operate them. Standard libraries for objects are contained by JavaScript, for such as Array, Date, Math, and the essence component of programming languages for instance managers, control framework and statements.

## Node Js

Node.js is an open source, a system application and furthermore is an environment for servers. Nodejs is an independent development platform built on Chrome's JavaScript Runtime that we can build network applications quickly and easily. Google V8 JavaScript engine is used by Node.js to execute code. Moreover, a huge proportion of essential modules are written in JavaScript.

Applications using NodeJS:

- WebSocket server
- Notification system
- Applications that need to upload files on the client.
- Other real-time data applications.

NodeJS should be used when:

- Building RESTful API (JSON).

You can use Node.js in building RESTful API (JSON). They handle JSON very easily, even more than JavaScript. API servers when using Node.js usually do not have to perform heavy processing, but the number of concurrent requests is high. • Applications that demand alternative connection protocols, not just http. With TCP protocol backing, any custom protocol can be built easily.

- Real-time applications.
- Stateful websites.

Every request on the invariable procedure is handled by Node.js, therefore building caching is simpler: store it to a comprehensive variable then all requests can approach the cache. The status of one client can be saved and shared with other clients and do not have to go through external memory.

## Express Js

Express is a framework purely based on Node JS. Express offers strong structures to develop an efficient backend. Express support HTTP and middleware method which makes the APIs made using Express JS relatively more robust and simpler to use. Express offers many tools for us to create a better backend environment. We must also take note that famous NodeJS frameworks like JS Sails and MEAN includes Express JS as a core function. We break down the simple route into two parts as controller and routes. This makes managing the routes easier because complex functions are in a different file. Also, we can reuse the same function again and again which is increasing the code reusability.

## Mongo Db

MongoDB is an open source database; it is also the leading NoSQL (\*) database currently used by millions of people. It is written in one of the most popular programming languages today. In addition, MongoDB is cross-platform data that operates on the concepts of Collections and Documents, providing high performance with high availability and ease of expansion

## React Js

Virtual-DOM is a JavaScript object, each object contains all the information needed to create a DOM, when the data changes it will calculate the change between the object and the real tree, which will help optimize re-render DOM tree. It can be assumed that is a virtual model can handle client data.

Component React is built around components, not templates like other frameworks. A component can be created by the create Class function of the React object, the starting point when accessing this library

ReactJS creates HTML tags unlike we normally write but uses Component to wrap HTML tags into stratified objects to render. Among React Components, render function is the most important. It is a function that handles the generation of HTML tags as well as a demonstration of the ability to process via Virtual-DOM. Any changes of data at any time will be processed and updated immediately by Virtual-DOM.

Pros of ReactJS:

- Update data changes quickly.
- React is not a framework so it offloads the constraints of libraries together.
- Easy access to who understands JS.

Cons of ReactJS:

- ReactJS only serves the View tier, but the library size is on par with Angular while Angular is a complete framework.
- Incorporating ReactJS within common MVC frameworks demands reconfiguration.
- Hard to reach for beginners on website developing

## MERN Stack in Website Development

### Concept of Stack technology:

The technical stack is a combination of technologies / frameworks / programming languages, etc. to create a complete software. With current software, there are usually two parts: client side and server side, also known as frontend and backend. Therefore, people also split the backend stack, the frontend stack as well. We often use the first letter to name the technical stack: LAMP (Linux, Apache, MySQL, PHP), MEAN (MongoDB, Express, Angular, NodeJS).

### Concept Of MERN Stack:

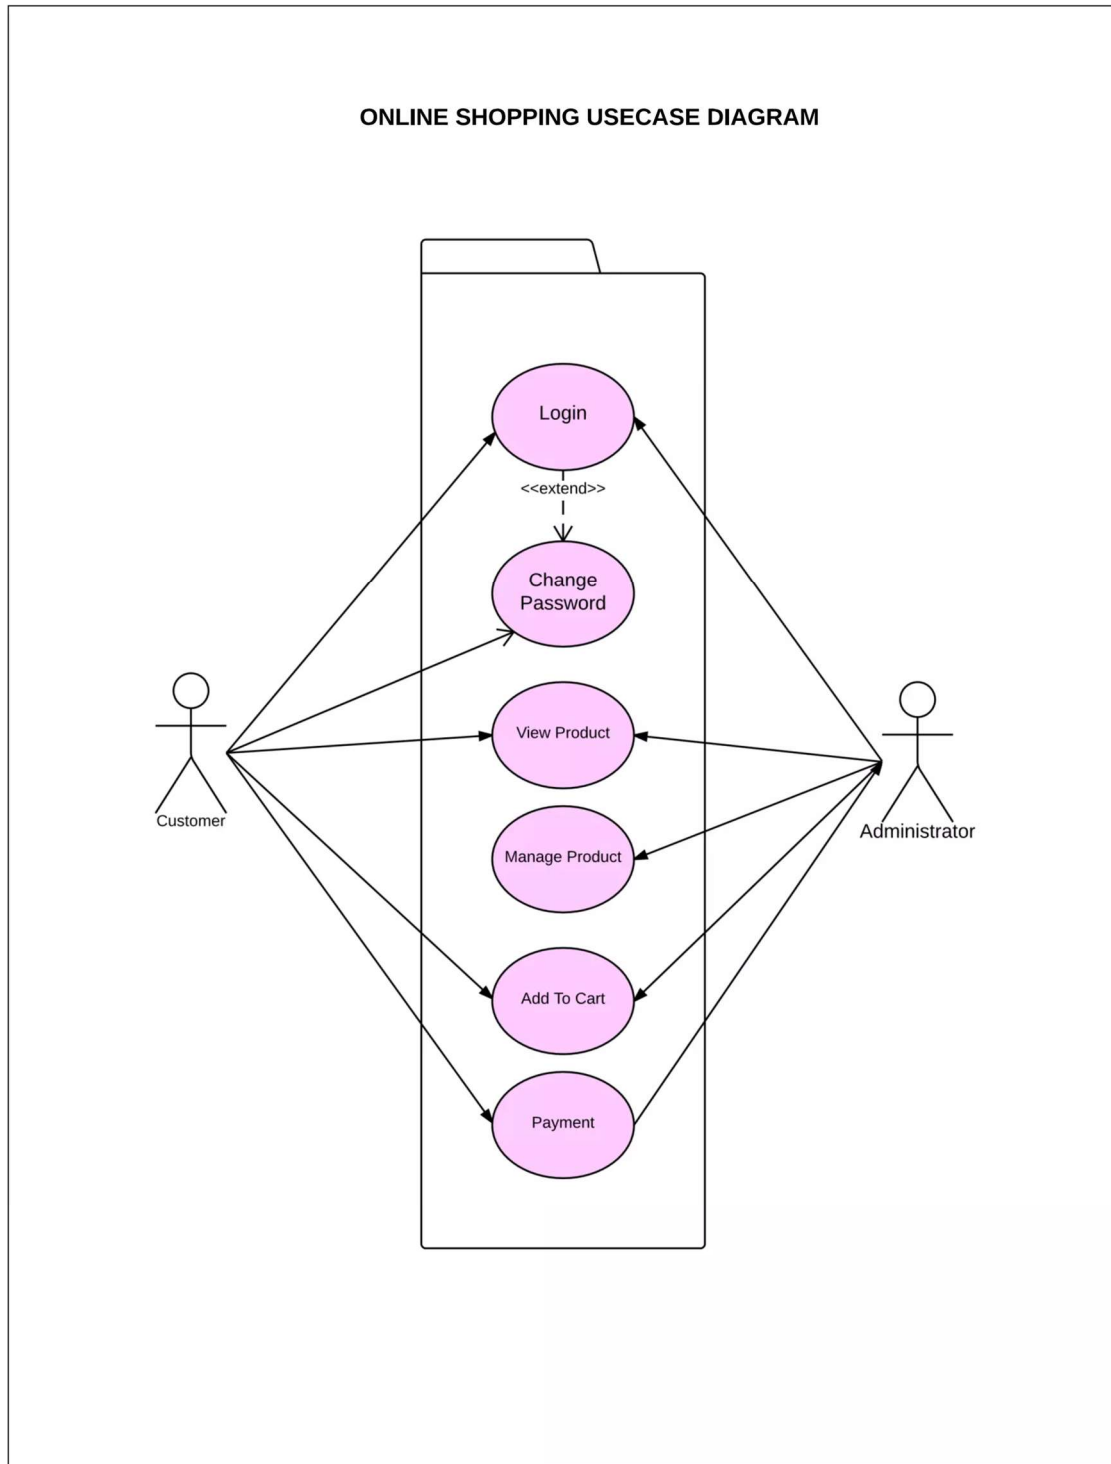

The MERN stack is a complete open source combination, all JavaScript-related technologies are also the hottest today: MongoDB, Express.js, React / React Native, NodeJS. People use the MERN stack to build Universal React App.

Highlights in MERN Stack:

- Hot Reloading for React Components.
- The code snippets are divided by React Router.
- Multi-language support.
- Generate code support.
- Modular structure.
- Docker support.
- Can customize the MERN version for individual users

```

## Login Form:

The screenshot shows a web browser at localhost:3000/login. The page has a dark background with a white login form in the center. The form is titled "LOGIN FORM" and contains two input fields: one for the email address "newadmin@admin.com" and one for a password represented by dots. Below the password field is a "FORGOT PASSWORD" link and a "LOGIN" button. The browser's address bar shows "localhost:3000/login". The page header includes "ECOMMERCE SOLUTIONS", a search bar, and navigation links: HOME, CATEGORIES, REGISTER, LOGIN, and CART. The footer displays "All Right Reserved © TECHIES" and links for About, Contact, and Privacy Policy.

## Admin Dashboard:

The screenshot shows the admin dashboard at localhost:3000/dashboard/admin. The page features a dark header with "ECOMMERCE SOLUTIONS", a search bar, and navigation links: HOME, CATEGORIES, NEWADMIN, and CART. On the left, there is an "Admin Panel" with a list of links: Create Category, Create Product, Product, Orders, and Users. In the center, a box displays the admin's details: "Admin Name : newadmin", "Admin Email : newadmin@admin.com", and "Admin Contact : admin123". On the right, there is a "DASHBOARD" button and a "LOGOUT" button. The browser's address bar shows "localhost:3000/dashboard/admin".

## Register:

The screenshot shows a web browser window with the URL `localhost:3000/register`. The page title is "Register - Ecommerce app". The header includes the "ECOMMERCE SOLUTIONS" logo, a search bar, and navigation links for "HOME", "CATEGORIES", "REGISTER", "LOGIN", and "CART". The main content area features a "REGISTER FORM" with the following fields: "Enter Your Name" (with the value "newadmin@admin.com"), "Enter Your Password" (with masked characters "\*\*\*\*\*"), "Enter Your Phone Number", "Enter Your Address", and "What is Your Favourite Sport". A "REGISTER" button is at the bottom of the form. The footer contains the text "All Right Reserved © TECHIES" and links for "About", "Contact", and "Privacy Policy". The browser's taskbar at the bottom shows various application icons and the system clock indicating 19:50 on 22-04-2023.

## User Dashboard:

The screenshot shows a web browser window with the URL `localhost:3000/dashboard/user`. The page title is "Dashboard - Ecommerce App". The header is identical to the Register page. The main content area displays the user's profile information: "Techie", "user@user.com", and "india". On the left, there is a "Dashboard" sidebar with links for "Profile" and "Orders". The footer is the same as the Register page, showing "All Right Reserved © TECHIES" and navigation links. The browser's taskbar at the bottom shows the same application icons and system clock as the previous screenshot.

## Create Category:

The screenshot shows a web browser window with the URL `localhost:3000/dashboard/admin/create-category`. The page is titled "Ecommerce Solutions" and features a sidebar with an "Admin Panel" containing links to "Create Category", "Create Product", "Product", "Orders", and "Users". The main content area is titled "Manage Category" and includes a form to "Enter new category" with a "Submit" button. Below the form is a table listing existing categories with "Edit" and "Delete" actions.

Name	Actions
mens collection	<a href="#">Edit</a> <a href="#">Delete</a>
Kids	<a href="#">Edit</a> <a href="#">Delete</a>
Sports Collection	<a href="#">Edit</a> <a href="#">Delete</a>
Electronics	<a href="#">Edit</a> <a href="#">Delete</a>
Mobiles	<a href="#">Edit</a> <a href="#">Delete</a>
Womens Collection	<a href="#">Edit</a> <a href="#">Delete</a>

The footer contains the text "All Right Reserved © TECHIES" and links to "About", "Contact", and "Privacy Policy". The system tray shows the date and time as 10:48 on 22-04-2023.

## Create Product:

The screenshot shows a web browser window with the URL `localhost:3000/dashboard/admin/create-product`. The page is titled "Ecommerce Solutions" and features a sidebar with an "Admin Panel" containing links to "Create Category", "Create Product", "Product", "Orders", and "Users". The main content area is titled "Create Product" and includes a form to create a new product with fields for category, photo, name, description, price, quantity, and shipping.

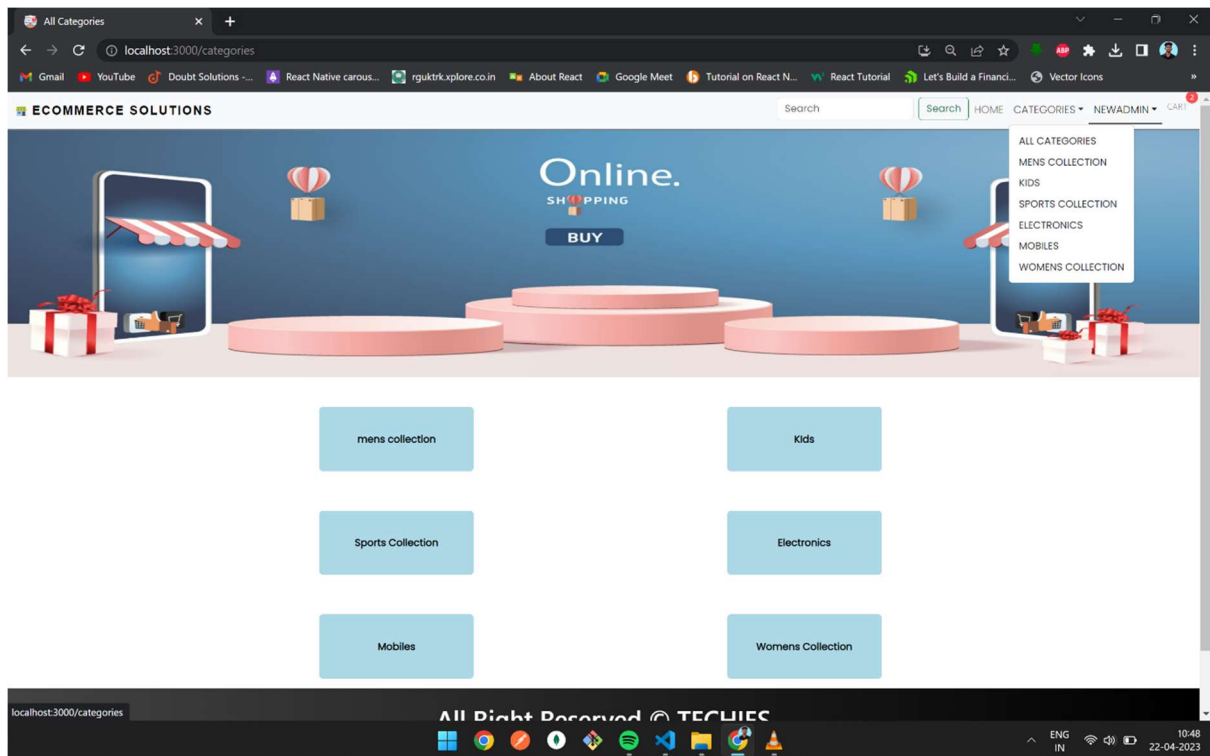

The form fields are:

- Select a category (dropdown)
- Upload Photo (text input)
- write a name (text input)
- write a description (text input)
- write a Price (text input)
- write a quantity (text input)
- Select Shipping (dropdown)

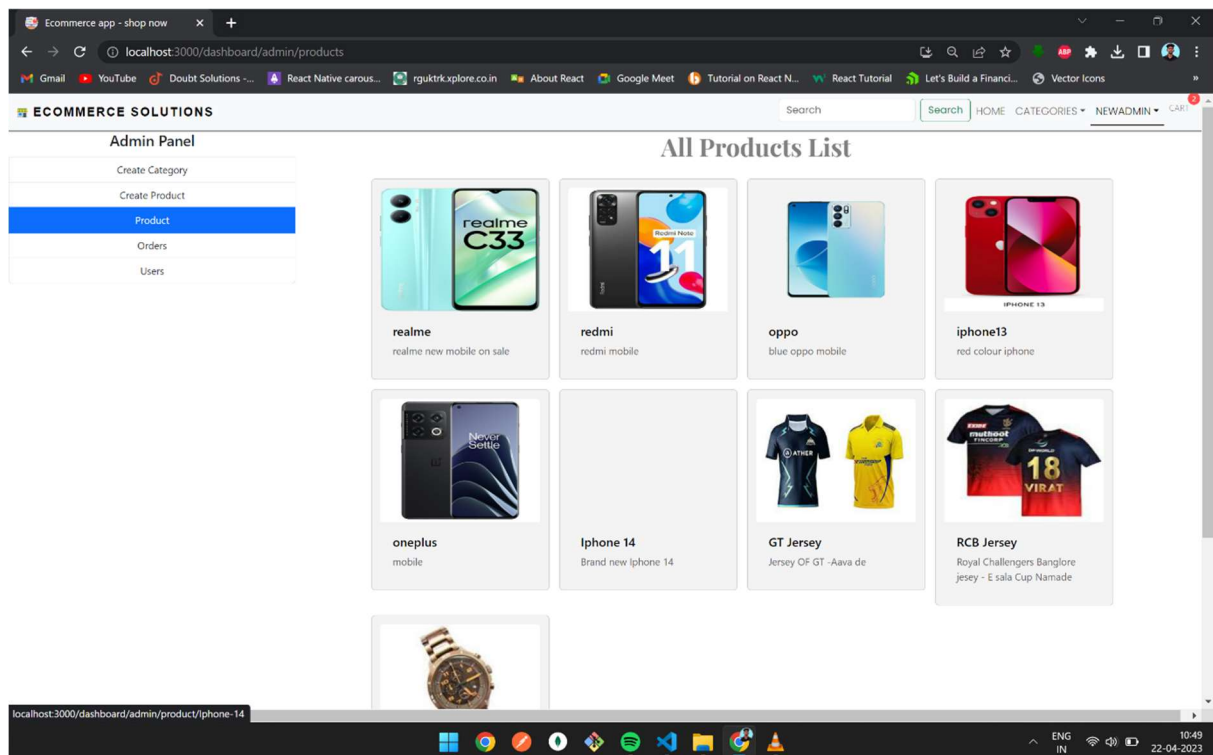

A "CREATE PRODUCT" button is located at the bottom of the form.

The footer contains the text "All Right Reserved © TECHIES" and links to "About", "Contact", and "Privacy Policy". The system tray shows the date and time as 10:48 on 22-04-2023.

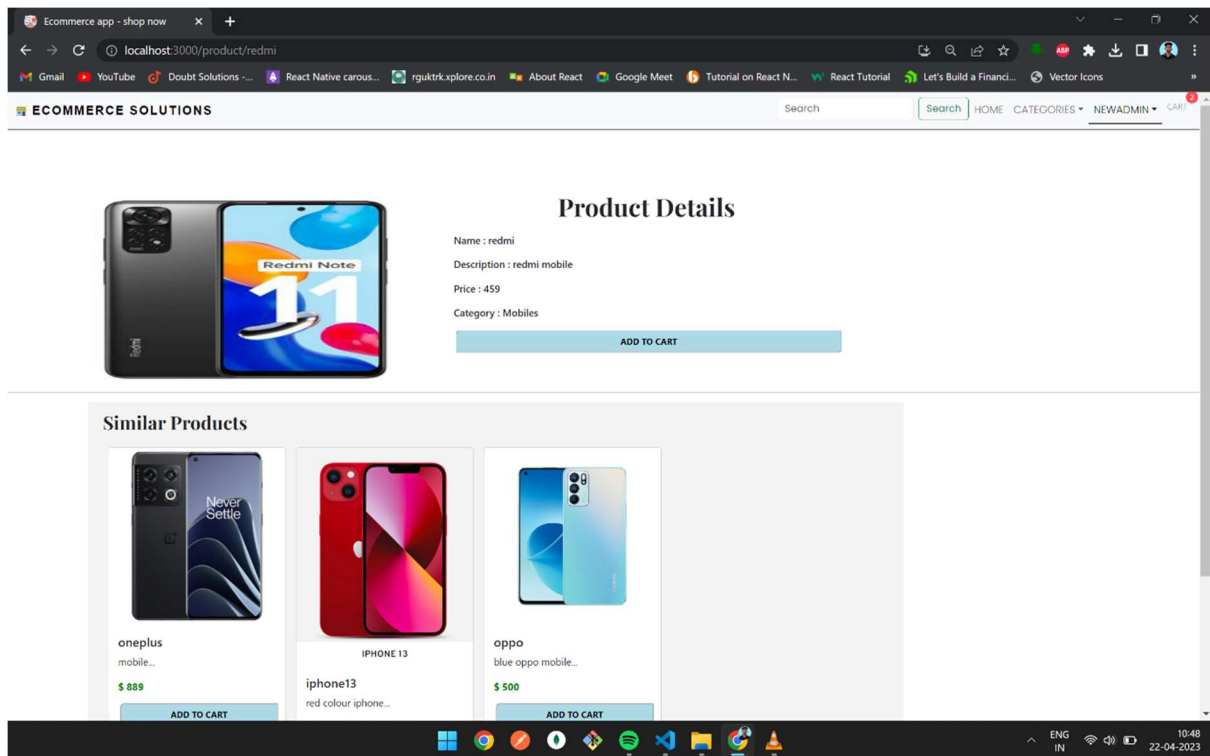

## All Categories:

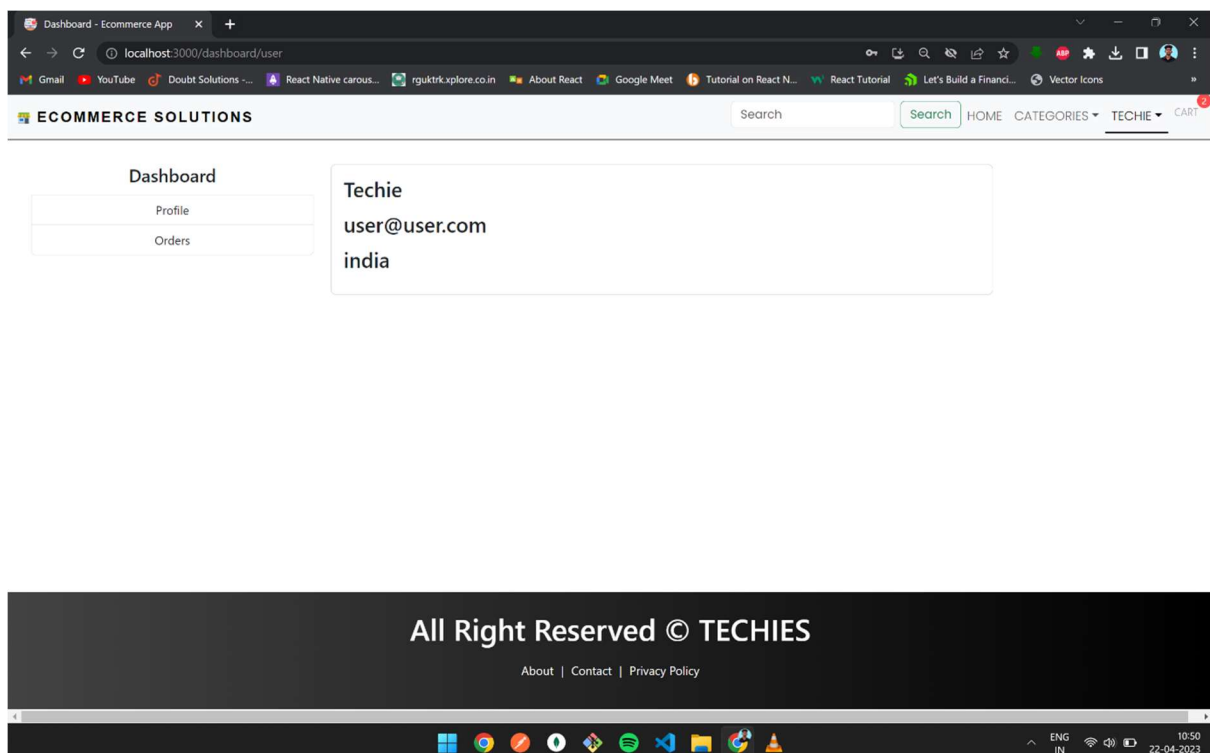

## All Products List:

## User Dashboard:

## User Order Status:

The screenshot shows the 'Your Orders' page in a web browser. The URL is localhost:3000/dashboard/user/orders. The page has a sidebar with 'Profile' and 'Orders' (selected). The main content area is titled 'All Orders' and displays a table of orders. The table has columns: #, Status, Buyer, Orders, Payments, and Quantity. There are three orders listed, each with a product image and details.

#	Status	Buyer	Orders	Payments	Quantity
1	cancel	Techie	19 days ago	success	3
 realme realme new mobile on sale Price :469					
 redmi redmi mobile Price :459					
 oppo blue oppo mobile Price :500					

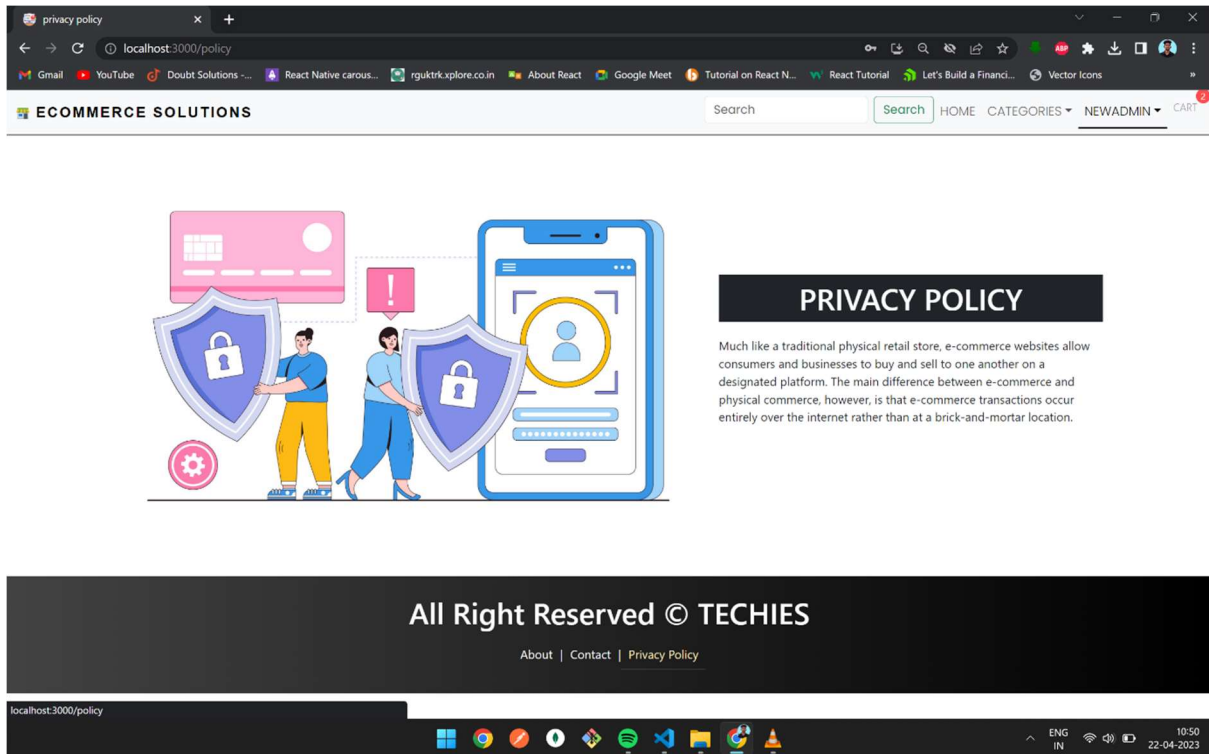

## Order Stats:

The screenshot shows the 'All Orders Data' page in the Admin Panel. The URL is localhost:3000/dashboard/admin/orders. The sidebar has 'Create Category', 'Create Product', 'Product', 'Orders' (selected), and 'Users'. The main content area is titled 'All Orders' and displays a table of orders. The table has columns: #, Status, Buyer, Orders, Payments, and Quantity. There are two orders listed, each with a product image and details.

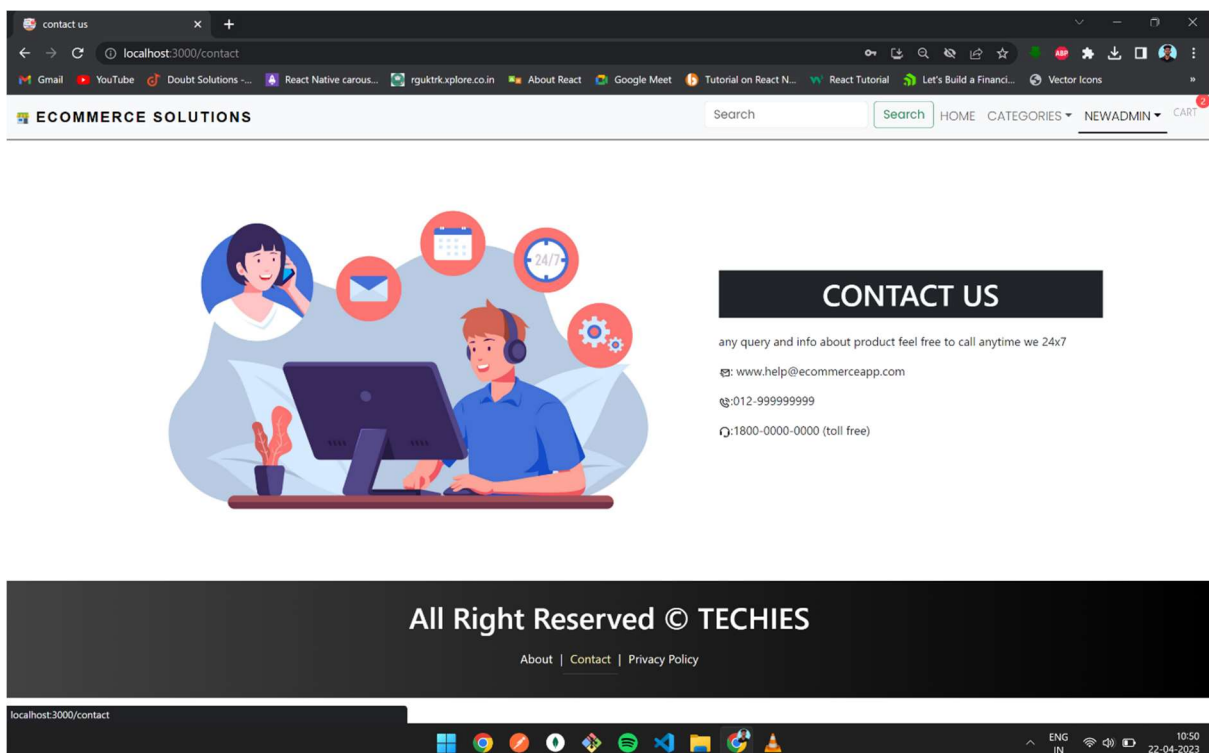

#	Status	Buyer	Orders	Payments	Quantity
1	Not Process ✓	newadmin	38 minutes ago	success	1
 realme realme new mobile on sale Price :469					
 redmi redmi mobile Price :459					
 oppo blue oppo mobile

## Interpretation Of The Project:

Our purpose was to find out whether the efficiency of an e-commerce app will increase with MERN stack and usage of modern tools. What we found out was it actually increases the efficiency. React itself is making use of the same code again and again, adding Redux, Material UI and Axios libraries to it not only increases the efficiency, but it also makes the development process much easier. Paired with using JSON for data transmission and robust APIs from Express JS backend make the application more efficient. Using GitHub made the merging of code much easier and efficient because it will automatically merge and points out if there are any conflicts there. It was also helpful to find many issues we had with our code. Changes made after that also increased the code efficiency. Using selenium to automate the testing of our web application saved us much time because otherwise it will take a long time to write test cases. And it helped us find many bugs and errors in our application which helped us to increase the application efficiency. Looking at above mentioned details we can see that using modern tools with MERN stack we can make an Ecommerce web application more efficient.

## Conclusion:

The main goal is to create an E-commerce web application that sells chocolatier items online using the frontend, backend, and database. This website is a completely functional website, starting with login authentication, admin authorization, adding things to the shopping cart, and using the payment gateway. Any branding or category sector can be used, whether on a small or large scale. They can easily use the web application, and without much effort, they can add products and establish new categories. The buyer will find it quite appealing to view the products while seated at home or at work. Smallscale businesses will benefit greatly from being able to sell products directly to consumers rather than through wholesalers or huge retail intermediaries which make both parties happy. And as we have used more modern tools boards for the project management and GitHub for version controlling that make much easier in the development stage and also for the planning stage.

## FUTURE SCOPE:

Social networking sites facilitate the purchasing of products from the comfort of our homes offices or anywhere with easy login. Also, e-Commerce sites have made the buying and selling of various products online. But now, it has become more than just selling and buying goods. So the Internet has become the most significant part of e Commerce for carrying out all day-to-day transactions smoothly. With this, India has shown tremendous growth in the eCommerce sector and provides new openings for all job seekers with great opportunities.

As internet use has increased, the eCommerce business has also witnessed a sudden flourishing with it This leads to an understanding that the internet has influenced the broadening of eCommerce businesses to a considerable proportion. So, we may expect the blooming of eCommerce marketing in near future in connection with the rise in internet usage. Also, eCommerce has made the transportation of goods and services between consumers and online shops an effortless task. It even offers customers a tension-free environment to customers and makes their purchases more smooth.
